

## WHAT WE'RE LOOKING FOR.

Frontend development in React.

Backend development in Rust.

Crawler/Clickbot programming in Python.

Mathematics genius –  
to enhance our evaluation logic.

You can apply either as a team or as an individual.

## YOUR EXPERTISE.

Success in this project requires more than just technical knowledge.

- Collaboration and teamwork in coding.
- Developing independent solutions for emerging challenges.
- Contribute innovative ideas.
- First practical experiences in applying your technological knowledge.

## OUR MISSION.

Small to medium sized seller on Amazon have difficulties onboarding and expanding their product offer. Manual advertising optimization by agencies is significantly too expensive and Amazon's algorithm is difficult to penetrate at the beginning. Our digital services help Amazon seller to streamline their product marketing, save time and money, build strong products and benefit from our proven seller expertise. To do this, we offer straightforward but effective tools to increase success on Amazon.

## WHAT WE DO.

Our focus is automatically categorizing keywords of Amazon campaigns per algorithm. This is crucial to ensure that sellers can effectively promote their products on Amazon. Further we are developing clickbots and crawlers that enable Amazon sellers to automate the listing process and product research. This allows seller to promote and apply their products more successfully while also freeing up more time for their core competencies.
