The EVEX Group consists of four brands: Amparex, IPRO, Euronet, and Optix which have joined forces over the last two years. We are a prominent PMS provider in Europe with each brand offering leading software solutions for opticians, acousticians, and therapists.

Our products provide the digital backbone of our customers' shops and practices enabling them to manage and optimize their entire business operations, customer interaction, and employee management. The offered solutions, further detailed on our website, are designed to integrate seamlessly into our clients' specialized workflows, offering end-to-end digital support and process automation.

In total, we serve over 8,000 individual shops in 19 different countries. Our strategic goal for the next years is to bundle our product expertise within one solution to continue expanding our value proposition and further enhance user experience through innovative modules by using AI.

We are currently developing a new, web-based software for opticians and acousticians. In this context, we are eager to experiment whether latest enhancements in AI can help us optimize the customer service aspect of the software.

The project is therefore split into three stages which can but don’t have to be done by the same team:

1. **Ideation** of potential use cases for AI in our existing and new software
2. **Proof of concept** development of 1-2 promising ideas by experimenting with different tools / AI solutions
3. **Implementation** of an AI module that can be integrated into the software

### YOUR PROFILE

- You are an individual or a team of up to 3 people
- You have a background in data science, software engineering, mathematics etc.
- You have experience in Python and ideally done first data science / LLM projects
- You are a team player, eager to learn new technologies and self driven

### WHY JOIN US?

**Learning:** You will be fully integrated into the product development and therefore gain first-hand experience on how classical software engineering and AI can be best combined. We will provide frequent code reviews and help you grow.

**Network:** Get access to our network, including the EVEX group and FLEX Capital (Private Equity company owning the EVEX group), for future internships or full-time positions.

**Culture:** We are a group of driven developers who enjoy building software that customers love. We strongly believe in trusting each other and communicating openly to achieve this.

### APPLICATION

- **Start date:** as soon as possible
- **Please apply individually or as a team**
- **Include your CV and 2-3 sentences about your motivation**
- **Send your application to Tobias Rieck**
  jobs@amparex.com
- **We’ll review your application and reach out to you shortly to schedule an interview call**
- **Further details regarding team set-up, start period, potential travel, and financial compensation will be discussed during the interview**
