# Project Study: Process Automation @ filu (Founder's Office)

#### About filu

filu is a rapidly expanding veterinary startup on a mission to ease clinic workloads and enhance pet care through innovative technology and smart, data-driven automation.

## Project Description

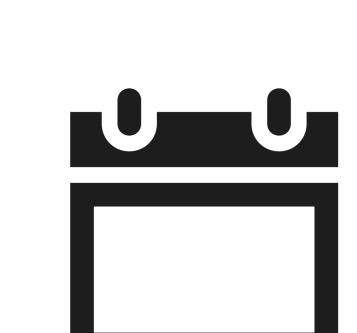

Several of our internal workflows are still manual, costing time, increasing errors, and tying up resources. You will help automate these processes to boost efficiency, reduce errors, and free up capacity, working closely with our founders to design solutions and a roadmap for future automation.

#### Your Tasks

- Dive into workflows: Analyze key processes in Operations, HR, or Finance together with our founders
- Spot opportunities: Identify and prioritize the best use cases for automation
- Build solutions: Develop and implement automated workflows using tools like Make.com, n8n, or Zapier
- Measure your impact: Document results and evaluate improvements in efficiency, accuracy, and team satisfaction

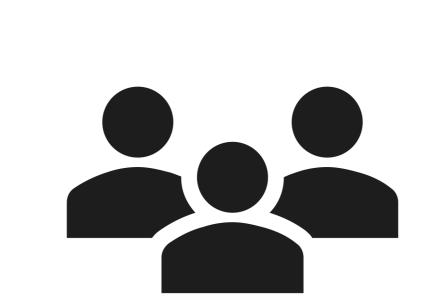

#### Your Profile

- Passion for process optimization and Al-driven automation tools
- Analytical thinker with a structured, independent work
- Basic automation or coding skills are a plus
- Hands-on problem solver eager to bring in your own ideas
- Excited to work in a dynamic, fast-paced startup environment

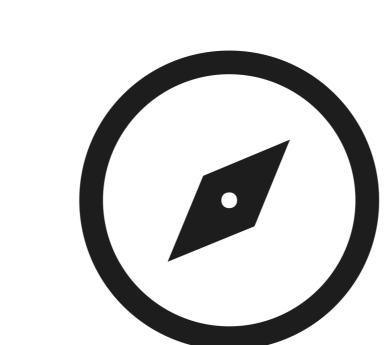

### Duration

3-6 months (part/full time)

Team Size 2-3 students

Mentorship

From our founder's office

Send your CV to recruiting@filu.vet. You can start immediately or upon agreement.
