# IDP @ beatandraise.com

**Learn about the *Data Industry in Finance, LLMs and Web development* with Iterative Works GmbH.**

**What We Do:**

beatandraise.com is building an alternative data provider in Finance. We aim to collect financial information for every investable company in the world. Currently, we have a repository of more than > 100 mio files and every single SEC filing.

**Why We Do It:**

Information gathering is typically a manual exercise, involving updating, error correcting and so on. It still needs humans but LLMs can make this very efficient. This is likely to disrupt a number of legacy data providers.

---

**What We are Looking For:**

1. **Flexible in thought and a bias for action.** Someone who wants to do things now than later. Show than Tell, ie be willing to build a prototype than talk about it.
2. An interest in **financial markets, stocks and companies.**
3. **Any coding language** as long as you atleast understand where ChatGPT might be wrong. Basic understanding of **databases, server-client models, how cloud computing works.**
4. We use a stack of remix, nodejs for the webserver, python for data tasks, postgresql as the database, solr as a lucene based search and azure for storage blobs.

**What you will get:**

1. **Agency and Experience:** You will be responsible for a fully functional web application that will answer questions based on data you have collected. You will deploy a RAG application eventually. You will be guided actively.
2. **Understanding:** You will learn about finance, markets and deploying applications with LLMs.

---

**Who you will be working with:**

Mohan Chennupati, Founder of beatandraise.com

Previously studied Computer Science, Economics and Microbiology and Worked at Lehman Brothers, UniCredit.
