Who are we?

Currently, about 40% of all meals in hospitals are thrown away, nursing staff are unnecessarily burdened, and errors in taking orders are directly reflected in patient feedback. With HospiChef, we solve these problems by digitizing the meal ordering in hospitals, giving patients control and hospitals the ability to manage the process.

Following our win at UnternehmerTUM TechChallenge 2021, we went through a year-long co-development and pilot phase with a large private hospital chain. Now we are live, and our software is already handling about 400 meal orders a day in a Munich hospital. After going from 0 to 1, we now want to sprint from 1 to 10 with your help.

Your Profile

- You are a team of 1–4 persons
- You are a motivated and independent worker who wants to drive digitalization in hospitals
- You have experience in web development using JavaScript or Python and know how to work with Git and RESTful APIs
- Familiarity with TypeScript, React and Django is a plus

Possible Projects

Depending on your skills and team size you will engineer new features for our web applications. For example:

- **Analytics**
  To make food in hospitals manageable for the first time, we want to deliver key insights to hospital management. Your tasks would be to build a future-proof reporting pipeline, design mockups, and implement compelling and actionable data visualizations.
- **Offline Mode**
  WiFi coverage in hospitals isn't always optimal. We want to enable staff to take orders even if network is temporarily unavailable. You would complement our online-first web application with an offline feature, considering different cutting-edge data-syncing solutions to make the work of hospital staff hassle-free.
- **Notifications**
  Staying in close contact with the patient as a key aspect of HospiChef. For example, we want to keep patients up to date regarding their stay and orders and remind them to order in time before the deadline. You would research different notification solutions for web applications, test them, and integrate the most promising.

Are you interested?

You can apply alone or as a team. Please send us your CV and relevant experiences to andreas.hartung@hospichef.com
