

# Project Study in Business Development

Happyrobot is looking for Business Development interns to help us get our computer vision platform to the next level!

🧐 Market Research | 💡 Design Thinking | 🎯 Customer Focus | 🚀 Deep-Tech Startup

## Your Role

- Use Design Thinking to identify new market opportunities.
- Talking to customers and conducting desk research.
- Work side by side with Happyrobot's founders to help us grow the company.
- Be awesome and grow personally!

## Skills & Expertise

- Always open to learn new things
- Excellent communication and interpersonal skills

We don't need any particular skills for this position. But being passionate about startups is a must! 😊

## Your Project Study

- Start date: as soon as possible! 😊
- If you have a fellow student with whom you'd like to carry out the project, bring them onboard!
- Regular 1:1 with founding team
- Mostly remote if you'd like, but we have our own office in the Incubator space in Garching, so we'd be super happy if you'd work with us physically there. We'll organize a few office days per week anyways with you, since nothing beats a white board and a few cups of tea / coffee for brainstorming.

## About Happyrobot

### *From data to insights within hours*

We're building Happyrobot to unlock the value from the raw, unlabeled image data in the world and turn that into actionable insights for organizations.

To realize that, we're building a no-code computer vision platform for instant model generation. From natural language and visual examples, the user can automatically label entire datasets and deploy custom models in a few hours. Check out a demo of our platform [here](#) or [here](#)!

## Apply

Drop us a line at [internships@happyrobot.ai](mailto:internships@happyrobot.ai) with your CV and preferred start date!

Looking forward to having you onboard! [Website](#) - [LinkedIn](#)
