

Who are we?

Currently, about 40% of all meals in hospitals are thrown away, nursing staff are unnecessarily burdened, and errors in taking orders are directly reflected in patient feedback. With Hospichief, we solve these problems by digitizing the meal ordering in hospitals, giving patients control and hospitals the ability to manage the process.

Following our win at UnternehmerTUM TechChallenge 2021, we went through a year-long co-development and pilot phase with a large private hospital chain. Now we are live, and our software is already handling about 400 meal orders a day in a Munich hospital. After going from 0 to 1, we now want to sprint from 1 to 10 with your help.

Your Profile

- You are a team of 1-4 persons
- You are a motivated and independent team player who wants to drive digitalization in hospitals
- You have experience in web development using JavaScript or Python and know how to work with Git and RESTful APIs
- Familiarity with TypeScript, React and Django is a plus

Possible Projects

Depending on your skills and team size you will engineer new features for our web applications. For example:

- **Patient Feedback**
For the first time, we want to give patients a voice in improving meals in the hospital. Your tasks would include designing and building a user-friendly feedback functionality within the patient app, relevant push-notifications, and a compelling visualization for decision-makers and kitchen staff.
- **Hospichief Shop**
It may be hard to offer gourmet meals in a hospital. But imagine you could pay a little extra to get that delicious ice cream that you love. With a built-in shop in the patient app, we could offer patients an easy way to purchase extras and sweeten their stay.
- **Offline Mode**
WiFi coverage in hospitals isn't always optimal. We want to enable staff to take orders even if network is temporarily unavailable. You would complement our online-first web application with an offline feature, considering different cutting-edge data-syncing solutions to make the work of hospital staff hassle-free.

Are you interested?

You can apply alone or as a team. Please send us your CV and relevant experiences to andreas.hartung@hospichief.com
