IDP in Software Development (Frontend or Backend)

Trado is looking for motivated TUM students that want to carry out an IDP in the field of B2B Software Development by leveraging GPT Technologies.

Develop an Web-App / B2B SaaS   AI and NLP Startup

Your Software will be directly tested and used by German DAX-Companies. So, you will make a real impact. It's a challenging task that's why we offer financial support of up to **1000€**.

Office in Center of Munich AND Garching

We are tackling the problem most companies in the world are struggling with: How employees buy stuff. Why do employees have to write 50 Mails and make 20 phone calls just to get a Software they already needed yesterday?
Employees simply DO NOT KNOW what and how to buy - and they don't have to. Simply ask Trado.

We are building an Amazon Experience for employees of leading enterprises to provide them with a Buying Experience never seen before. For that we combine UX, AI and NLP. We already have leading DAX Companies as Customers and you can help us **ship the very first product!**

YOUR ROLE

- Develop our Web-App further
- You decide your role based on your Skill Set: Frontend or Backend or UX or NLP. Everything is possible.
- No Tickets: Work like a Spotify/Google/Netflix Engineer. Work independently and manage your own projects.

TECH STACK

- Frontend: React / Typescript
- Backend: Django / Python (Postgres, MongoDB)
- AI: Python, pinecone mongodb
- CI/CD AWS, GitHub, Docker

YOUR IDP

- Start Date: ASAP
- Regular 1:1 with the Trado CTO & CEO
- If you want: Mentoring from successful Entrepreneurs that sold their company for several 100 Mio. €
- If you have fellow students , bring them onboard!

APPLY

If you want to experience how to build a B2B SaaS Startup from scratch and work directly with the founders apply via this link: https://xeffrshdh99.typeform.com/c/vlwJ44Wr
