

Project Study: Accelerating the green energy adoption for commercial buildings

ABOUT US

Rooftop solar has the potential to cover almost 25% of the EU electricity consumption. But realizing commercial rooftop solar is a pain. At Voltaro, we are building the easiest way to commercial onsite solar. With our one-stop-shop, we offer commercial real estate owners automated solar analysis and planning, a scalable solution for solar installations and future-proof energy management.

THE TASK

Join our ambitious team of impact-driven individuals dedicated to creating a sustainable future. Support the daily operations of our project team and gain hands-on experience in planning and realizing large-scale commercial PV systems. The challenge:

Improve our processes | You'll learn which processes are working well and identify opportunities for improvement. You'll establish new processes and optimise existing ones to continuously improve our efficiency and quality of work.

Build a scaling concept | To better onboard future project managers, you'll develop an onboarding concept and build a knowledge database. You'll have access to the best HR and video tools to ensure your success.

YOUR PROFILE

We are looking for a team of two to three students, preferably in your master's and with first working experience in a fast-paced environment.

Fluent in English or German | If one of you is fluent in German, that's okay.

Impact-driven | You want to join us in shaping the future of sustainable buildings and make a real impact.

Excellent organizational and analytical skills | You are comfortable working in a structured and digital environment and are eager to learn.

Interested? Submit your CV including a short motivational text, your ideal starting date and team setup to laura.koch@voltaro.de
